

Tigerdo Security Management Platform

Executive Summary

Tigerdo is a next-generation security management ecosystem designed to streamline operations, enforce accountability, and ensure rapid emergency response. Built with a unified Web and Mobile architecture, Tigerdo seamlessly connects Company Managers, Supervisors, and Security Guards onto a single, real-time platform.

Tigerdo replaces physical logbooks and scattered communication with a centralized digital infrastructure.

The Tigerdo Ecosystem (Roles & Features)

1. Company Manager (Web App)

The Manager Dashboard is the high-level command center of the operation. It provides total oversight over the business.

Key Features:

- **HR Management:** Seamlessly register your security company, hire and onboard supervisors, and manage the roster of security guards.
- **Client & Location Allocation:** Register new clients and precisely assign supervisors and guards to specific client locations.
- **Global Visibility:** Monitor all activities of both supervisors and guards in real-time through a bird's-eye dashboard.

TIP

How to access: The Company Manager logs into the secure web portal.

2. Supervisor (Web App)

Supervisors have a dedicated suite to manage their teams on the ground, ensuring that all posts are manned and operating smoothly.

Key Features:

- **Guard Deployment:** Register new guards and assign them directly to specific locations
- **Activity & Attendance Tracking:** View real-time activity feeds from all assigned guards. Instantly track lateness, daily occurrences, and shift compliance.
- **Performance Verification:** Ensure guards are completing their rounds and responding to alerts in a timely manner.

TIP

How to access: Supervisors log into the secure web portal using credentials provided by the Manager.

3. Security Guard (Mobile App)

Guards operate using a powerful, user-friendly mobile application built specifically for the field. It removes the need for paperwork and ensures strict compliance.

Key Features:

- **Geo-fenced Shift Management:** The app utilizes strict logic to check and verify the guard is physically present at their assigned location *before* allowing them to start their shift.
- **Digital Occurrences:** Guards log daily occurrences directly in the app, completely replacing easily damaged or lost physical logbooks.
- **Searchable History:** An interactive history tab allows guards and supervisors to select and filter past logs by date.
- **Access Control Lists:** A dedicated "Authorize" page provides quick reference to pre-approved people and vehicles allowed on the premises.

- **Smart Reminders:** Automated patrol notification reminders alert the guard when it is time to conduct rounds.
- **Rapid Emergency Alerts:** A dedicated emergency interface that automatically sends bulk SMS alerts and initiates phone calls to predefined emergency contacts in critical situations.

TIP

How to access: Guards download the app from and log in using the credentials generated by their Supervisor or manager
